

AMPERFIED WALLBOX
CONNECT.HOME
SMART WALLBOX. SMART
CHARGING WITH THE APP.

CLEVER,
SMART,
APP.

WALLBOX CONNECT.HOME THE BENEFITS FOR YOU.

Easy authorisation with RFID

You decide who can access your wallbox. The RFID cards can be configured and the users defined using the online interface or the app. The charging process starts by tapping the RFID card.

More efficiency in the charging process

Using the app, you can easily start and finish your charging and reduce or increase the charging current at any time. Do you have a home energy management system? You can also use your self-supplied solar power for charging.

Charging technology made in Germany

The brand HEIDELBERG has stood for quality and sustainability in the global printing industry for more than 170 years. But we are also making an impression in the field of electric mobility with innovative, customer-oriented solutions. We have now given our activities in this area, which we have been engaged in since 2014, a name – AMPERFIED. The wholly owned subsidiary founded in April 2022 stands for smart charging technology made in Germany, and aspires to being a trustworthy and reliable partner on the way to the future of electric mobility.

Simple, inexpensive installation

The wall charger can easily be installed by an electrician or an installation service. The installation costs are reduced to a minimum thanks to integrated DC residual current detection. Intuitive to use, maintenance-free and suitable for all vehicles with a standard type 2 charging socket.

Technical highlights of the Amperfied Wallbox connect.home

- \ Integrated Wi-Fi and LAN connections
- \ Authorisation via RFID
- \ App for controlling and diagnosing the wallbox
- \ Online interface for additional configuration, control and diagnosis
- \ Connection to Home Energy Management System (HEMS).
- \ Parking stand for charging connector
- \ Easy installation thanks to flexible cabling

App for controlling and diagnosing the wallbox
